Industry Rate Trends and Future Rate Structures

4 Hours

The addition of smart grid technologies, energy efficiency programs and pressure to send price signals to promote energy conservation is changing how utilities are pricing electric services. This session discusses industry rate trends and rate structures your utility may consider to take advantage of the additional information from smart grid and to promote energy conservation. This session will discuss:

1. Types of residential rate structures that promote energy efficiency and how to minimize the financial consequences to the utility
2. How to help ensure cost recovery from customers
3. Issues to consider when developing time differentiated rate structures
4. New rate structures to help promote economic development
5. Innovative rate forms to reflect wholesale power supply charges
